SISCOG unveils its latest solutions at UITP Global Public Transport Summit 2023
Showcasing innovative solutions addressing current public transport challenges

23/05/2023 - SISCOG, a software company specialised in solutions for optimised resource scheduling, management and dispatching for public transport operators, is set to showcase its latest innovations addressing key challenges in public transport at the UITP Global Public Transport Summit 2023 in Barcelona from June 5-7.

Attendees can explore in stand 6B216 the company's comprehensive suite of products designed to address the most pressing challenges faced by the transport industry. These challenges include attracting and retaining staff, achieving greater environmental sustainability through the efficient utilization of vehicles, and swiftly solving operational disruptions.

Aligned with industry concerns, SISCOG will also present a Spotlight Forum Session, on June 7, titled "Tackling staff shortages: using AI and OR to produce crew rosters with better work-life balance". This session will explore how SISCOG leverages artificial intelligence and operational research to produce crew rosters that improve work-life balance for staff members while guaranteeing all work is covered and optimised.

Visit SISCOG at stand 6B216 during the UITP Global Public Transport Summit 2023 to learn more about their innovative solutions, and their potential to transform public transport operations and cater its current pressing concerns.

SISCOG provides cutting-edge decision support software solutions for optimised resource scheduling, management and dispatching in public transport. Incorporating more than 35 years of specialised knowledge and using a combination of Artificial Intelligence and Operational Research techniques, the SISCOG Suite addresses these companies' need to offer their passengers/clients the best service while being efficient and sustainable in the use of their most important operational resources – time and space (timetables), vehicles, and staff.

The SISCOG Suite is composed by ONTIME, for creating and updating timetables, FLEET, for scheduling and managing vehicles, RAILNODE, for scheduling and managing local resources, and CREWS, for scheduling and managing staff.

Amongst its clients are renowned companies, such as the Canadian, Danish, Dutch, Finnish, and Norwegian railways, the Suburban Trains of Copenhagen and of Barcelona, freight railways CargoNet and Medway, the Lisbon Metro and London Underground.
